

This is what you should will receive (assembled cup, 2 screws, bracket):

The black bracket on the right has a living hinge. Bend it until it is 90 degrees:

Take whichever pinball leg off that you want to install it on and line the bracket up with the holes (it can flip either way). This bracket goes behind the leg leaving a clean look:

Bracket should look like when installed:

Lift up the red door, and lineup your first top screw in the pocket

The bosses on the cup will align with the bosses on the bracket

Install the top screw but do not tighten all the way. Make sure the bottom boss is lined up too:

Then tighten the bottom screw all the way, then make sure the top screw is tightened all the way:

You're all ready to set drinks in your drunkingly improvised neutrino bomb!
